

FitNESS: Open Courseware for Responsible Food Packaging and Supply Chain Education

Christophe COTILLON

ACTIA, Paris, France

Abstract:

The ecological transition imposes a revision of the logic of transformation and distribution of food including ingredients and packaging to avoid it travels thousands of kilometers before reaching consumers' plates. The solutions will come through innovation within our industries and the education of the coming generation; the Fitness projects contribute to this evolution. The two consecutive projects, FitNESS for "Food packaging open courseware for higher education and staff of companies" and funded by the Erasmus+ Program of the European Union, have been designed to imagine future responsible food packaging and supply chains by detailing the different technical and scientific aspects of food packaging without taking sides.
