

Status and Prospects of Packaging Plastics and Cardboard Recycling in China

Song XIAOWEI

China Institute of Metrology Environmental Metrology Center, No. 18, North Third Ring East Road, Chaoyang District, Beijing 100029

Recycling plastics for food packaging products is the future development trend, China currently has no clear legal provisions for food recycling packaging products. This presentation will introduce China's food packaging materials regulations and development history. The existing plastic and cardboard recycling industry, the future demand for food packaging materials recycling, and the development trend of laws and regulations are discussed. In order to take food safety as the center, take into account environmental protection, circular economy and green consumption, promote the development of food packaging recycling industry, but also promote waste plastic treatment and environmental protection.
